

PARTIALLY HYPERBOLIC DYNAMICAL SYSTEMS

B. HASSELBLATT AND Y. PESIN

CONTENTS

1. Introduction	2
1.1. Motivation	2
1.2. Outline	5
2. Definitions and examples	7
2.1. Definition of partial hyperbolicity	7
2.2. Examples of partially hyperbolic systems	12
2.3. The Mather Spectrum	15
3. Stable and unstable filtrations	17
3.1. Existence and subfoliation	17
3.2. Absolute continuity	19
4. Central Foliations	21
4.1. Normal hyperbolicity	21
4.2. Integrability of the central foliation and dynamical coherence	23
4.3. Smoothness of central leaves via normal hyperbolicity	25
4.4. Robustness of the central foliation	26
5. Intermediate Foliations	27
5.1. Nonintegrability of intermediate distributions	27
5.2. Invariant families of local manifolds	29
5.3. Lack of smoothness of the intermediate foliations	31
6. Failure of absolute continuity	31
6.1. An example of a foliation that is not absolutely continuous	32
6.2. Pathological foliations	33
7. Accessibility and Stable Accessibility	35
7.1. The Accessibility property	37
7.2. Accessibility and topological transitivity	38
7.3. Stability of accessibility	39
8. The Pugh–Shub Ergodicity Theory	42
8.1. Conditions for ergodicity	42
8.2. The Pugh–Shub Stable-Ergodicity Theorem	45
8.3. Ergodicity and stable ergodicity for toral automorphisms	49
9. Partially Hyperbolic Attractors	50

Date: January 25, 2005.
